EDUCATION AND TRAINING:

Bachelor of Engineering- Software Engineering

September 2020 - April 2025

Ontario Tech University – Oshawa, ON.

Courses: Web Programming, Artificial Intelligence, Distributed Systems, Data Structure & Algorithms, Embedded Systems

SKILLS:

Languages: Java, JavaScript, Typescript, Python, C#, SQL, HTML, CSS

Tools & Technologies: LLM's, Claude Code, RAG, AI Agents, MCPs, LangChain, Git, React, Redux, Tailwind, MySQL, MongoDB, Express.js, Linux, Docker, Kubernetes, Power BI, Excel, Visio, Azure

WORK EXPERIENCE:

Data Analyst

January 2025 – Ongoing

Black & McDonalds - Project Controls, Pickering, ON (Valid OPG Security Clearance)

- Developed a Project Health Dashboard with Power BI, DAX, SQL, and Python, automating legacy reporting processes, saving 25+ hours per week and enabling project managers to proactively identify risks.
- Led the business integration of Procore for project management across a region of 1,000+ employees, identified software gaps and authored detailed requirements for third-party developers to implement enhancements.
- Built a Schedule Gantt Chart Tool with Power BI, SQL, Python, and Matplotlib to forecast resource needs, identify shortages or surpluses, and optimize hiring, improving efficiency and reducing costs.

Software Engineering Intern

May 2023 – August 2024

Ontario Power Generation - Project Management, Darlington, ON

- Developed a streamlined Work Report tool with Power BI Report Builder, SQL, and Python, consolidating data from multiple sources, automating daily fieldwork reports, and reducing report generation time by >90%.
- Developed and optimized SQL views, tables, and procedures for large datasets, significantly reducing load times and enhancing performance of legacy systems used for critical project tracking.
- Designed and implemented automated metric dashboards in Power BI, using Python and SQL to provide real-time insights for project managers, simplifying access to project data for monitoring and enabling faster decision-making.

Software Research Engineer

May 2022 – September 2022

Ontario Tech University - SAIN Lab, Oshawa, ON

- Designed and implemented a full-stack survey website using JavaScript, HTML, CSS, ExpressJS, Node.js, and MongoDB to raise awareness about Password Managers and the risks associated with weak passwords.
- Developed Python scripts to analyze pilot tester data, ensuring comprehensive documentation for future use.
- Achieved significant engagement, with over 1,000 users completing the survey on Amazon Mechanical Turk, resulting in a 50%+ increase in awareness of password management practices and the dangers of weak passwords.

PROJECTS:

[Generative AI Powered Educational Assistant](#)

- Developed a web app using Next.js, Express.js, MongoDB, Firebase, LangChain, and OpenAI API to enable students to query their professor's lecture specific content, bridging the gap between students and educational content.
- Utilized OpenAI API, LangChain, and Retrieval Augmented Generation for precise information retrieval from course materials, significantly reducing student search times and enhancing learning efficiency.

[Decentralized Voting Web App](#)

- Developed a decentralized voting web application with blockchain technology, utilizing smart contracts, MetaMask authentication, and Hardhat for secure and transparent elections.

[Marketplace Mobile App](#)

- Developed a marketplace application using React Native, ExpressJS and MongoDB integrating Firebase for user authentication, Google Maps API, and a seamless User Experience for buying and selling items.
